

Digipass[®] as a Service with lifecycle management

Digipass as a Service simplifies passwordless, phishing-resistant authentication by accelerating deployment, reducing IT effort, and ensuring consistent, secure workforce access, making adoption fast, predictable and scalable.

Highlights

The simplest way to deploy passwordless, phishing-resistant authentication across your workforce

- **Fast, frictionless rollouts at scale:**
Keys arrive ready for quick activation requiring minimal setup effort for users and IT.
- **Lower operational burden:**
Automated lifecycle processes reduce IT workload by simplifying issuance, activation, revocation, and replacement.
- **Improved user experience:**
Intuitive activation and self-service options minimize friction and reduce helpdesk tickets.
- **Stronger authentication assurance:**
FIDO2 device-bound authentication protects against phishing, credential theft and MFA bypass.
- **Optional global fulfillment:**
Add-on service for managed shipping, customs handling, and worldwide delivery.
- **Compliance-ready visibility:**
Centralized oversight delivers audit-ready insight into credential status and usage.

Scaling passwordless authentication

Rolling out phishing-resistant, passwordless authentication across a diverse workforce is often more complex than it looks. Distributing hardware, tracking inventory, and onboarding employees securely and consistently can create friction. Activation steps vary by device and environment, generating helpdesk tickets and slowing adoption. Without centralized lifecycle management, IT teams struggle with device visibility, revocation, and replacements, making passwordless programs harder to govern and scale.

Centralized lifecycle management for predictable security

Digipass as a Service removes operational friction by automating hardware issuance, activation, and lifecycle workflows. By integrating the MyID CMS - powered by Intercede - with Microsoft Entra ID, administrators gain policy control over device issuance and lifecycle management, with real-time visibility into credential status and replacement cycles. This reduces risk, lowers manual effort, and ensures that every key is accounted for, helping organizations maintain consistent, secure access across the workforce while keeping IT overhead low.

Consistent, friction-free end-user experience

Employees receive a FIDO2 security key with a simple, guided activation process, avoiding the manual, lengthy, or complex registration steps often associated with Microsoft Entra ID. The experience works consistently across browsers, devices, and environments, including shared or remote setups. Users can quickly complete activation without IT intervention. This uniform approach reduces variability and confusion, lowers helpdesk demand, accelerates enrollment, and helps drive adoption of passwordless authentication.

A predictable, scalable model

Delivered as a subscription, Digipass as a Service combines FIDO2 keys, lifecycle governance, replacement workflows, and optional logistics into

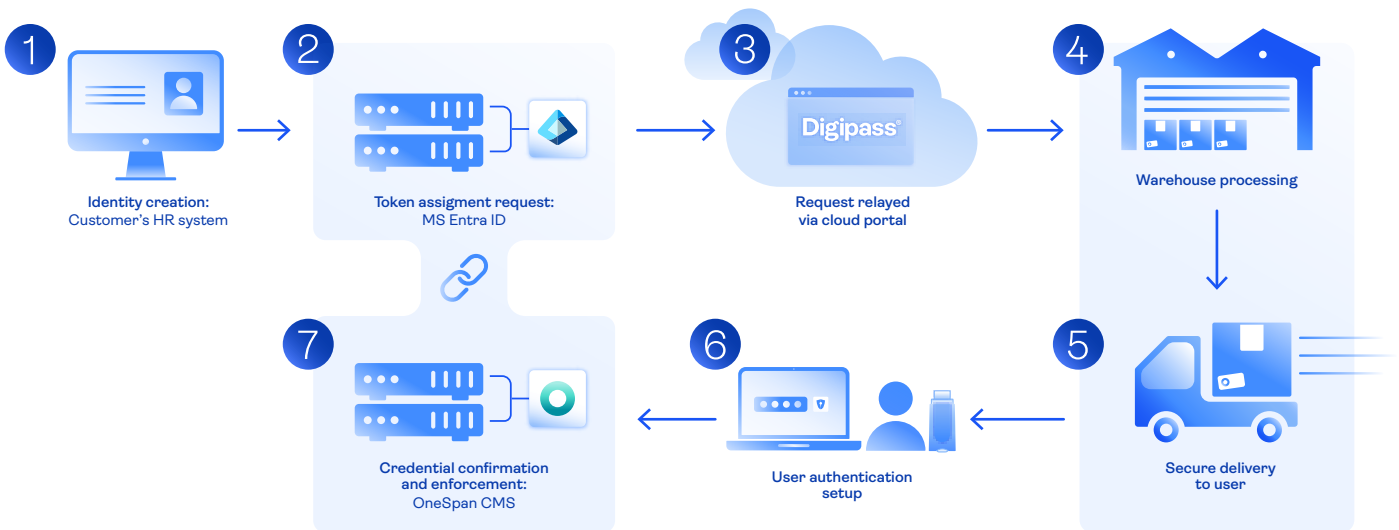

one solution. Organizations avoid fragmented procurement, reduce unplanned costs, and maintain consistent, secure access. The service scales with the workforce and adapts as identity strategies evolve, supporting Zero Trust initiatives and modern compliance requirements with minimal IT effort.

Optional global fulfillment to accelerate deployment

For large or distributed teams, hardware logistics can be a major bottleneck. Optional end-to-end global fulfillment simplifies stock management, packaging, customs, and shipping to central offices or directly to users, with full tracking. This allows organizations to focus on adoption and security rather than operational hurdles.

Key Features

- **Phishing-resistant hardware security keys**
Digipass FIDO2 security keys are included in the subscription for strong, passwordless authentication.
- **Lifecycle management**
MyID CMS integrates natively with Microsoft Entra ID to streamline key assignment, revocation, and replacement, while providing centralized visibility into credential status and inventory — all within existing identity workflows and with minimal user friction.
- **Single-vendor solution with optional global fulfillment**
The entire solution is supplied and supported by OneSpan as a single vendor, simplifying procurement, deployment, and ongoing support. Optional global fulfillment services include stock management, packaging, customs handling, and worldwide shipping with full tracking to sites or individual users.

About OneSpan

OneSpan is a global leader in digital security, trusted by thousands of enterprises across 100+ countries—including more than 60% of the world's 100 largest banks—to safeguard digital accounts, secure financial transactions, and prevent fraud. Our award-winning solutions provide passwordless authentication, digital transaction security, and advanced mobile application protection, helping organizations meet the highest security standards and global compliance requirements. As cyber threats grow more sophisticated, OneSpan delivers cutting-edge technology to safeguard customers, mitigate risks, and ensure trust in every digital interaction.
