

# Authentication Server

A software suite for banks and other businesses requiring secure access through proven, state-of-the-art server technology.

## HIGHLIGHTS

OneSpan Authentication Server is a comprehensive, centralized and flexible authentication platform designed to deliver complete authentication lifecycle management via a single, integrated system.

It offers secure and seamless access to a variety of corporate resources and (banking) applications, from SSL VPNs to cloud-based apps. It supports OneSpan's entire range of authentication solutions, and simplifies authentication management for both administrators and end users.

OneSpan Authentication Server is a centralized authentication server offering strong authentication and validation of transaction signatures. It verifies authentication requests from individuals trying to access the corporate network or business applications.

The solution adds additional security measures to standard username/password logins across a wide range of servers and services. This stops unauthorized logins, even when passwords have been compromised. OneSpan Authentication Server is ideally suited for large and small enterprise network security implementations, application security and online banking security.

“OneSpan Authentication Server has an excellent high available design structure, an auto enrollment feature and is fully integrated with Windows Active Directory and Radius services. Together with the web based administrator interface, these features ensure that system administrators are able to work in a transparent and straightforward manner.”

**Mohammed Abu-Nejim**  
Head of Data Networks for Qatargas

## Strong, two factor authentication

The combination of OneSpan Authentication Server and Digipass® provides strong user authentication and greater security than static passwords, which expose the organization to data breaches. OneSpan Authentication Server provides a turnkey solution that can be rapidly implemented and operational.

## User friendly transaction validation

OneSpan Authentication Server offers highly secure transaction signature validation for banks and financial institutions. Optional features include support for EMV-CAP and Hardware Security Module (HSM) to validate the signature in a secure and tamper-proof environment. By using the latest Cronto® technology, users can enjoy the best experience for their online banking by simply scanning a Color QR Code in order to log in or confirm a transaction.

## Interoperability at the front-end

OneSpan Authentication Server uses a non-intrusive method of enabling Digipass authentication. It can be integrated using RADIUS, with Microsoft IIS-based applications such as Outlook Web Access, Citrix StoreFront or Microsoft RDWeb Access, or with any Internet application using SOAP. Additional modules are available for direct plug-in in various third party systems, such as Juniper SBR and Microsoft ADFS3.0/4.0.

## Wide Range of Supported Databases

OneSpan Authentication Server supports a wide range of ODBC compliant databases for data storage and ships standard with MariaDB. The Digipass related data can be stored with the users in the ODBC database and synced with Windows user information from the Active Directory.

## Convenient web based user interface

All administration functions are available through a web based user interface, allowing remote administration and creating new opportunities for managed security services providers. End user support is efficient and easy to manage thanks to a dedicated overview of all functions that are required and used on a daily basis by helpdesk staff. An intuitive SelfManagement Website allows endusers to manage their software and hardware Digipass without Helpdesk intervention, thus freeing up admin resources.

## Extensive auditing and reporting

The audit console monitors incoming and outgoing events on the OneSpan Authentication Server. Data gathered by the audit console provides critical details necessary to effectively manage a remote access environment. Extensive XML or HTML formatted reporting is provided for helpdesk troubleshooting, system- and security auditing, and accounting purposes.

## Fits in any environment

OneSpan Authentication Server is available in the widest range of supported platforms: Windows Server, Ubuntu and RedHat distributions, VMware, Hyper-V and Citrix virtual environments, as well as dedicated appliance formats.

## HIGHLIGHTS

- Can be used out of the box or integrated with existing infrastructure
- Designed to fit the needs of organizations of any size
- Easy to install, manage and support
- Easy to integrate in existing infrastructure
- Efficient tools for helpdesk staff
- Robust and easy expandable with users and applications
- Cronto technology ensures an easy and convenient user experience
- Smooth migration, updates and maintenance

“The integration went smoothly and quickly. OneSpan’s Professional Services team and the technical team supported the integration well. In addition, the configuration with our NBF Direct online banking application was also done swiftly, thus allowing us to enhance two-factor authentication for our corporate banking customers in a quick and easy way. With this additional layer of security, we have made our customers even happier with NBF’s services and level of customer engagement.”

**Nasar Siddiqui**

Head of Electronic Channels for National Bank of Fujairah

FEATURES	
• Supports Digipass two-factor authentication, Cronto QR and transaction data validation	
• Supports Hardware Security Module (HSM)	
• Supports RADIUS and Microsoft IIS web server-based clients (Outlook Web Access, Citrix StoreFront, Remote Desktop Web Access)	
• Supports Office365 via ADFS3.0/4.0 and SBR	
• Supports Internet hosted applications via SOAP	
• Supports wireless protocols & the return of RADIUS attributes	
• Validation of Digipass Authentication for Windows Logon for locally connected users, in online and offline mode	
• Active Directory integration, ODBC database support	
• High availability through server replication and load balancing	
• End user Self-Management Website	
• Web-based administration GUI in a single browser window for all administrative functions	
• Dedicated dashboard page	
• Comprehensive audit system, with storage in a database or text file and an optional live audit viewer	
• Activity reporting with output in XML/HTML format	
• SNMP Monitoring	
• Available as Appliance or Virtual Appliance	

COMPLIANCE TO STANDARDS	
Radius	• RFC 2865 and RFC 2866
Wireless	• EAP, PEAP
Authentication	• Digipass OTP (challenge / response, response only) • Digipass Signature (transaction validation) • OATH (event based, time based) • EMV-CAP

SUPPORTED ENVIRONMENTS*	
Operating System (Windows version)	• Windows Server 2012 (64-bit) • Windows Server 2012 R2 (64-bit) • Windows Server 2012 Essentials (64-bit), 2012 R2 Essentials (64-bit) • Windows Server 2016, 2019
Operating System (Windows desktop)	• Windows 10 (v1507 – v2004, v20H1 – v21H2) • Windows 11 (v21H2) • Windows Server 2012, 2016, 2019
Operating System (Linux version)	• Ubuntu Server 18.04 LTS, 20.04 LTS (64-bit) • RedHat Enterprise Linux version 7.8+, 8.x (64-bit) • CentOS 7.8+ (64-bit)
Virtual Images	• VMWare ESXi Server version 5.5, 6.0, 6.5, 6.7 • Citrix XenServer 6.2, 6.5SP1, 7.0 • Microsoft Hyper-V
Supported Web servers	• Apache Tomcat version 9.0.48 • IBM WebSphere Application Server 8.5.5 Should include Java: JRE8, JSP2, JS2.4
Supported Web browsers	• Google Chrome, Microsoft Edge, Mozilla Firefox, Internet Explorer The Administration Web Interface supports all browser versions currently supported by the respective vendors
Data store (DBMS)	• Oracle 12c R2, 18c, 19c (64-bit, Linux, Windows) • Microsoft SQL Server 2012 SP4, 2014, 2016, 2017, 2019 with AlwaysOn Support (Windows) • MariaDB 10.4.22 (Linux, Windows)
LDAP Back End Authentication	• Windows Server 2012 AD, 2012 R2 AD, 2016 AD, 2019 AD • IBM Security Directory Server 6.3
HSM	• SafeNet ProtectServer Gold, Orange, Express • SafeNet ProtectServer External 2, Internal-Express 2

## About OneSpan

OneSpan, the digital agreements security company™, helps organizations accelerate digital transformations by enabling secure, compliant, and refreshingly easy customer agreements and transaction experiences. Organizations requiring high assurance security, including the integrity of end-users and the fidelity of transaction records behind every agreement, choose OneSpan to simplify and secure business processes with their partners and customers. Trusted by global blue-chip enterprises, including more than 60% of the world's largest 100 banks, OneSpan processes millions of digital agreements and billions of transactions in 100+ countries annually.
