

## Unsurpassed phishing-resistant authentication with Delinea & Digipass®

**Delinea provides powerful identity security solutions that protect privileged access across hybrid enterprises. With Secret Server and Cloud Suite, organizations can secure highly privileged account credentials with FIDO2 authentication. By integrating Digipass FIDO2 security keys, Delinea enhances workforce authentication with passwordless, phishing-resistant login, so that organizations can secure critical systems while providing users with a seamless experience.**

### How Delinea and OneSpan collaborate

Delinea and OneSpan have partnered to provide enterprises with an advanced authentication solution that eliminates password-based vulnerabilities. By integrating Digipass FIDO2 security keys with Delinea's FIDO2-enabled authentication in Secret Server and Cloud Suite, organizations can secure privileged access, reduce fraud risks, and streamline authentication workflows—without relying on mobile-based authentication factors.

### Challenge: Strengthen security beyond passwords

Organizations face growing threats from credential theft, phishing attacks, and unauthorized access to privileged accounts. However, securing access for a hybrid workforce—spread across different locations and devices—presents additional challenges.

Traditional authentication methods like passwords, OTPs, and mobile-based MFA remain susceptible to cyber threats and add friction to the user experience.

Enterprises need a secure yet intuitive authentication solution that works across all environments without adding IT complexity.

### Solution: Zero-Footprint, User-Friendly Authentication

By integrating Digipass FIDO2 security keys with Delinea Secret Server and Cloud Suite, enterprises achieve phishing-resistant authentication using FIDO2-based cryptographic security. Unlike OTPs or mobile-based authentication methods, Digipass FIDO2 security keys ensure that credentials remain secure, tamper-resistant, and easy to use.

Employees can authenticate quickly and securely, reducing login friction while strengthening enterprise security—without requiring additional software installations or mobile device dependencies.

### Key features

- **Tamper-Resistant Credential Storage:** Authentication keys are stored inside the Digipass FIDO2 security key, protected by a secure element, ensuring credentials cannot be breached or extracted.
- **Zero-Footprint Solution:** No need for software installations or mobile apps; simply plug in and authenticate.
- **Streamlined User Onboarding:** Organizations can efficiently provision new users by issuing Digipass FIDO2 security keys, eliminating passwords and reducing enrollment complexity.

### Benefits

- **Phishing-resistant security:** Eliminate credential theft and social engineering risks with strong FIDO2 authentication.
- **Passwordless login:** Effortless user authentication using biometrics or a simple tap, overcoming password fatigue, reducing login time, and improving productivity.
- **Effortless Integration:** DIGIPASS FX is a zero-footprint solution that deploys effortlessly within Delinea's privileged access management (PAM) environment.
- **Reduced IT overhead:** Minimize password reset requests and authentication-related support tickets.
- **Regulatory Compliance:** Meet HIPAA, FIPS 140-3, EPCS, NIS2, DORA, NIST 800-63, GDPR, and Zero Trust security requirements.

- **Lower IT Overhead & Helpdesk Costs:** Eliminating password resets and SMS-based authentication reduces IT workload, decreases support tickets, and eliminates the need for enterprise-managed mobile devices.
- **Seamless integration:** Digipass FIDO2 security keys work consistently across Delinea Secret Server, Cloud Suite, and other enterprise applications.
- **Plug-and-Play Deployment:** Digipass FIDO2 security keys provide fast and straightforward authentication across desktops, laptops, and mobile devices, without requiring additional software.
- **Achieve Compliance:** Meet stringent security mandates, including HIPAA, EPCS, NIS2, DORA, NIST 800-63, FIPS 140-3, GDPR, and Zero Trust architecture guidelines.

By integrating Digipass FIDO2 security keys with Delinea Secret Server and/or Cloud Suite, enterprises achieve a best-in-class authentication solution, enhancing security, simplifying hybrid workforce access, and meeting the highest compliance standards while keeping teams productive and moving.

## About Delinea

Delinea is a pioneer in securing human and machine identities through intelligent, centralized authorization. Our solutions empower organizations to seamlessly govern interactions across the modern enterprise, ensuring robust security while maintaining operational efficiency. Leveraging AI-powered intelligence, Delinea's cloud-native Identity Security Platform applies context across the entire identity lifecycle — from cloud and infrastructure to data, SaaS, and AI — enabling real-time threat detection and rapid response. By securing all users and identities — including workforce, IT admin, developers, and machines — Delinea guarantees secure access regardless of location or device. With deployment in weeks, not months, 90% fewer resources to manage than the nearest competitor, and a guaranteed 99.99% uptime, Delinea delivers security and efficiency without compromise. ## About OneSpan

OneSpan is a global leader in digital security, trusted by thousands of enterprises across 100+ countries—including more than 60% of the world's 100 largest banks—to safeguard digital accounts, secure financial transactions, and prevent fraud. Our award-winning solutions provide passwordless authentication, digital transaction security, and advanced mobile application protection, helping organizations meet the highest security standards and global compliance requirements. As cyber threats grow more sophisticated, OneSpan delivers cutting-edge technology to safeguard customers, mitigate risks, and ensure trust in every digital interaction.
